Experiment 4: Mobile Network Protocol Stacks Using Figma

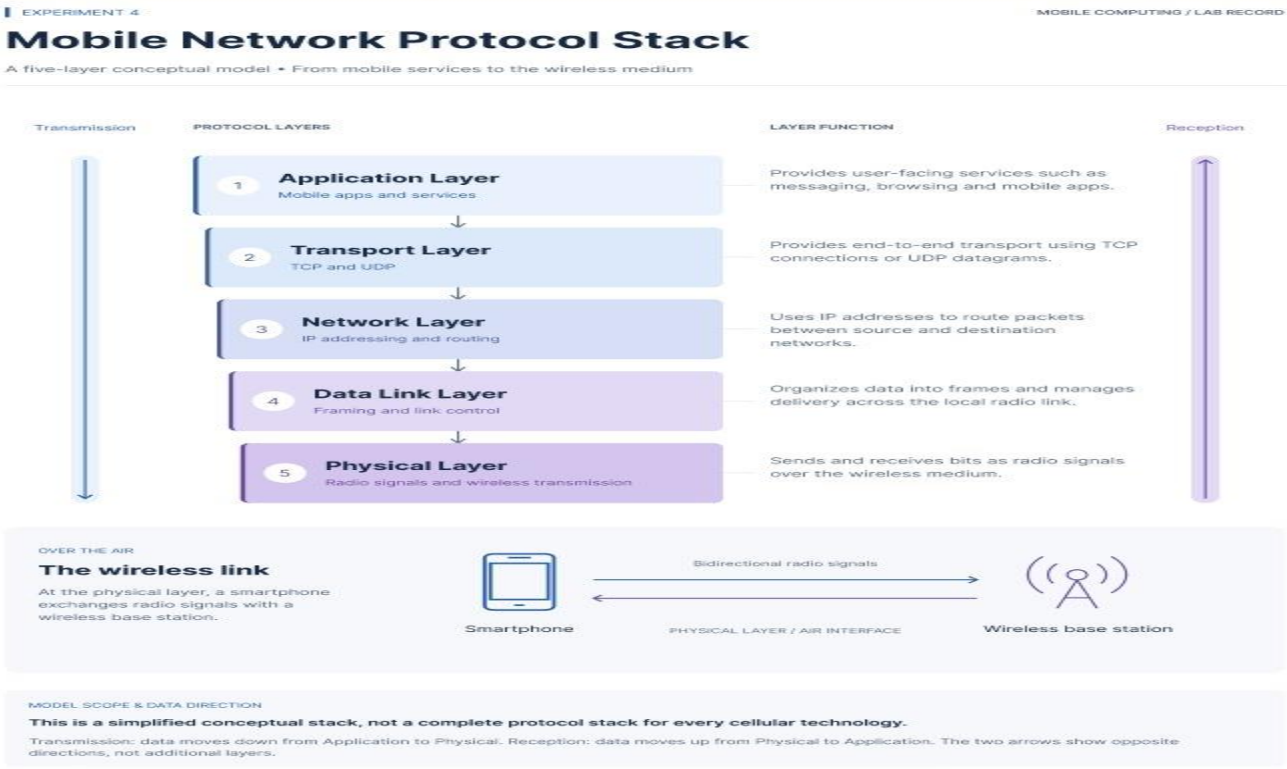

Aim: -To create a visual representation in Figma highlighting the key elements of mobile network protocol stacks.

Procedure

1. Open Figma and create a new design file.
2. Add the title “Mobile Network Protocol Stack” at the top of the design.
3. Create five rectangular boxes to represent the Application Layer, Transport Layer, Network Layer, Data Link Layer, and Physical Layer.
4. Arrange the boxes vertically in the correct order.
5. Add suitable descriptions inside each box, such as mobile applications, TCP/UDP, IP addressing and routing, framing and error control, and radio signal transmission.
6. Apply different light colors to each rectangle to distinguish the protocol layers.
7. Connect the boxes using arrows to represent communication between the layers.
8. Adjust the alignment, spacing, text size, and colors to make the diagram clear and readable.
9. Preview the design and verify that all five layers and their descriptions are displayed correctly.

Output

Result: -Thus, a visual representation of the mobile network protocol stack was created successfully using Figma. The diagram illustrates the five protocol layers and their basic functions in network communication.
